Experience

Product Manager, Five9

June 2026 - Present

- Build multiple products from 0 to 1 while managing AI Insights, GenAI Studio, Agent Assist, Knowledge Studio, and Transcription Services.
- Redesigned AI Insights workflows, defined UI requirements with design teams, and translated customer feedback from demos into feature requirements and prototypes.
- Resolve customer issues with Sales, Technical Account Managers, and Professional Services, connecting customer needs with product and engineering decisions.
- Owned Galileo AI implementation for prompt-injection defenses and model metrics; developed implementation roadmaps, alternatives, and technical enablement sessions.
- Took an Initiatives Platform from concept through deployment on GCP, using Llama and Databricks for executive OKR and quarterly business review preparation.
- Built a GCP dashboard consolidating Slack updates and quarterly commitments for AI Agents Product Management and Forward Deployed Engineering teams.

Software Engineer, Five9

June 2025 - June 2026

- Served as interim Product Manager for Insights while engineering the platform: groomed features, resolved customer issues, and built dashboard prototypes.
- Developed two shared APIs for GenAI Insights, Agent Quality Management, and Agent Assist; deployed Llama models in GenAI Studio and Knowledge Studio.
- Owned implementation and performance of Gemini integrations on Google Vertex AI.
- Improved internal QA efficiency by 96% through cross-model result retrieval across microservices; built RxJava services that reduced model-response latency by an average of 10 ms per API call.

Machine Learning Engineer, AstroSeed

Aug 2023 - Dec 2024

- Built a plant-health product from prototype to drone deployment, using convolutional neural networks (CNNs) that achieved 98.57% classification accuracy.
- Built C++ data pipelines to collect, clean, and structure classifier outputs for client delivery; developed distributed image processing to return model results for display.
- Programmed drone operation in C++ for controlled settings and changing environmental conditions, combining software development with hardware deployment.

Machine Learning Researcher, National Security Innovation Network (NSIN)

Jan 2022 - May 2023

- Conducted customer discovery with military personnel, including lieutenants associated with Naval Sea Systems Command (NAVSEA), to understand operational needs.
- Built a minimum viable product (MVP) from initial concept in C++ and Python for planned deployment on unmanned aerial vehicles (UAVs).
- Developed and trained a model using Python and PyTorch to analyze ship-hull damage data through an Arizona State University and U.S. Department of Defense research partnership.

Education

Arizona State University, B.S. Computer Science

Aug 2020 - May 2024

- **Award:** 1st place among 155 teams, Ira A. Fulton School of Engineering Capstone Showcase (May 2024).
- **Coursework:** Human Computer Interaction (UI/UX), Software Quality Assurance & Testing, Distributed Systems, Machine Learning, Design & Analysis of Algorithms

Technical Skills

Product: Customer Discovery, Requirements, Roadmaps, Prototyping, UI/UX, Cross-Functional Delivery

Languages: C++, Python, Java, SQL, Go, Rust, Kotlin, TypeScript, JavaScript

Backend and Cloud: APIs, RxJava, Spring Boot, Distributed Systems, Docker, Kubernetes, GCP, AWS, Azure, Git

AI and Data: PyTorch, LLMs, Llama, Galileo AI, Databricks, Spark, Kafka, Data Pipelines

Web: React, Lit, Node.js, Svelte
